

Open EC2 instances

Switch the region closest to you mine is Mumbai

Then choose Launch Instances and then name your instance

- Choose Add new tag.
- For the next tag, use this information:
 - Key: Env
 - Value: production

Choose amazon linux as you AMI

And choose instance type if you have free eligible plan & For Key pair (login), select Proceed without a key pair

You can use a key pair to securely connect to your instance. Ensure that you have access to the selected key pair before you launch the instance.

Proceed without a key pair (Not recommended)

Default value ▼

Keep the network setting as it is

Then click Launch Instance then you get green message shows that instances has been created

This Instance we made is for production, now we will make it for development

Add names and tags

Keep things same please and then click launch instances

The screenshot displays the AWS Management Console's EC2 Instances page. At the top, the user is logged in as AhmedUmar (689744602638) in the Asia Pacific (Mumbai) region. The page title is 'Instances (2)' with an 'Info' link. Below the title, there are buttons for 'Connect', 'Instance state', 'Actions', and 'Launch instances'. A search bar allows filtering by attribute or tag. The main table lists two instances:

Name	Instance ID	Instance state	Instance type
nextwork-dev-ahmedumar3313	i-057928fdcbe76d67b	Running	t3.micro
nextwork-prod-ahmedumar3313	i-03852a7835b3bd51a	Running	t3.micro

Below the table, the 'All instances' section provides a summary of instance health and alarms. It includes three cards:

- Instance alarm states:** Shows 'In alarm' as 'None' with a green checkmark. A link 'Show instances in alarm' is provided.
- Service health:** Shows 'EC2 service status' as 'Operating normally' with a green checkmark.
- Health events affecting EC2 instances:** Shows 'Open events' as 'None' with a green checkmark. A link 'Show instances' is provided. 'Upcoming events' are also listed.

The footer contains links to CloudShell, Agent Toolkit for AWS, Feedback, Console Mobile App, Privacy, Terms, and Cookie preferences. The copyright notice is '© 2026, Amazon Web Services, Inc. or its affiliates.'

Now we will make IAM Policies and then we will give it to Development Instances

Go to IAM

And then click *Create Policy*

Switch to json

Copy and paste this exact json policy

```
{  
  "Version": "2012-10-17",  
  "Statement": [  
    {  
      "Effect": "Allow",  
      "Action": "ec2:*",
```

```
"Resource": "*",  
"Condition": {  
  "StringEquals": {  
    "ec2:ResourceTag/Env":  
"development"  
  }  
}  
},  
{  
  "Effect": "Allow",  
  "Action": "ec2:Describe*",  
  "Resource": "*"   
},  
{
```

```
"Effect": "Deny",  
"Action": [  
  "ec2:DeleteTags",  
  "ec2:CreateTags"  
],  
"Resource": "*"  
}  
]  
}
```

Fill the policies details

Review and create [Info](#)

Review the permissions, specify details, and tags.

Policy details

Policy name

Enter a meaningful name to identify this policy.

Maximum 128 characters. Use alphanumeric and '+=, @-_' characters.

Description - optional

Add a short explanation for this policy.

Maximum 1,000 characters. Use alphanumeric and '+=, @-_' characters.

Your policy has been created

Now we have to create Create an AWS Account Alias

Go to IAM->Dashboard->Below Account Alias click Create

And fill this and then create alias

Now go to user groups and then choose create group

The after clicking create group fill the important informations

Now choose users and then click *create users*

Now fill these important user details

Look at the details properly please

You have created user sign-in and these are the details which you can see

To test access copy the URL and then test it on new browser

Then you would get this

Then you would see that there are access denied because In IAM Policies you set rule of not create tags or delete in insatnces

Go to the same region where you made your instances

Select one of the instances and then click stop instances

Then you will see the big error

Then you will try to stop instance of development but you would get the same error then switch to root account then do the same then instance will be stopped
